How to run Webpage:

To set up and run the project start by installing the required dependencies using the command **pip install -r requirements.txt**. Once the dependencies are installed you can start the Flask application by running **python main.py**. After starting the application, open a web browser and navigate to **http://127.0.0.1:5001** to access the Medicine Search page.

How to run Tests:

To run the unit tests first ensure that pytest is installed. If it is not installe, you can install it with the command **pip install pytest**. Once pytest is available execute the tests by running **pytest test_app.py** in the terminal. The test results will be displayed in the terminal indicating the number of tests that passed or failed; it includes pass and failures cases.
